260.1 **PURPOSE**

A. To provide some universally applicable suggestions and procedures that may be helpful when setting up an ergonomically correct work station in an office setting.

260.2 **SCOPE**

A. This procedure is designed to protect all Central New Mexico Community College (CNM) employees from office work related musculoskeletal disorder, including cumulative trauma disorders and overexertion injuries.

260.3 **RESPONSIBILITIES**

A. Manager/Supervisor:
   (1) Observe employees and report ergonomic needs to the Safety department for individual assessment.

B. Employees Shall:
   (1) Be aware of ergonomic issues. These include:
       (a) Correct body positioning
       (b) Basic furniture and equipment adjustments
   (2) Ask for help when needed.
   (3) Report discomfort or injuries to their supervisors.

C. Safety Director/Designee
   (1) Develop and maintain the office ergonomic program and review it annually.
   (2) Ensure evaluations are completed as required.
   (3) Offer recommendations and/or adjustments when necessary.

260.4 **DEFINITIONS**

A. **Ergonomics**- An applied science concerned with designing and arranging things people use so that the people and things interact most efficiently and safely —called also biotechnology, human engineering, human factors.

B. **Musculoskeletal Disorders (MSDs)**-Are injuries and disorders that affect the human body’s movement or musculoskeletal system (i.e. muscles, tendons, ligaments, nerves, discs, blood vessels, etc.). Common examples include:
   (1) Carpal Tunnel Syndrome
   (2) Tendonitis
   (3) Muscle / Tendon strain
   (4) Ligament Sprain
   (5) Tension Neck Syndrome
   (6) Thoracic Outlet Compression
   (7) Rotator Cuff Tendonitis
   (8) Epicondylitis
   (9) Radial Tunnel Syndrome
   (10) Digital Neuritis
   (11) Trigger Finger / Thumb
   (12) DeQuervain’s Syndrome
   (13) Mechanical Back Syndrome
260- OFFICE ERGONOMICS

(14) Degenerative Disc Disease
(15) Ruptured / Herniated Disc

C. Repetitive Motion Injuries (RMI)- Also called repetitive stress injuries, are temporary or permanent injuries to muscles, nerves, ligaments, and tendons caused by performing the same motion over and over again. A common repetitive motion injury is carpal tunnel syndrome.

260.5 GENERAL PROCEDURE/TECHNIQUES

A. Postural Guide

(1) Always check your working position when using a computer. To avoid unnecessary discomfort, make sure the following key principles are in place.

(2) Neutral Neck Position:

(a) When looking at your work, keep your neck in a neutral or aligned position. Position the monitor directly in front of you to avoid turning your neck to the side.

(b) Center the monitor in front of you at arm's length distance and position the top of the monitor above seated eye level. You should be able to view the screen without turning or tilting your head up or down.

(c) Place the monitor at least 20 inches away from you (slightly more than an arm’s length). Adjust as needed for your visual comfort.

(d) If you must use a telephone simultaneously with the computer, a headset is recommended. Don’t try to hold the handset between your shoulder and ear. If you chose to use a telephone handset, position the telephone close to you to avoid over-reaching.

(3) Supported Spine:

(a) Place your feet flat on the floor or on a footrest if necessary.

(b) Your chair should provide you with good back support. Maximize the contact of your back with the chair back using chair adjustments or cushions as needed.

(c) Sit all the way back in the chair against the backrest.

(d) Set the back tilt in a slightly reclined position, about 100 degrees.

(e) If your chair has an active recline mechanism, use it to change your position from time to time.

(f) It is often useful to have armrests. However, they should be adjustable in height and width to allow for resting the arms with your shoulders in a relaxed position.

(g) The chair seat depth should be sufficient to support your thighs while providing a small space between the edge of the chair and the back of your knees.

(4) Arm/hand Positions:

(a) Your computer mouse should be positioned within easy reach. Over-reaching can result in shoulder and/or arm discomfort.

(b) Keep your elbows in a slightly open angle (about 100°) with your wrists in a straight position.

(c) If you cannot adjust your keyboard height, raise your chair and use a footrest.

(d) Your hands should be slightly lower than your elbows with your fingers pointing toward the floor. (Note: If you recline back in your chair, you might not need to tilt the keyboard.)
Check the alignment of your wrist, and then set the angle of the keyboard as needed. Your sitting posture will affect how you adjust your keyboard and computer mouse.)

(e) If you use a keyboard tray, it should be wide enough to also house your computer mouse.

(f) If you use a palm support, use it to support your palms only when pausing between keying. Do not place your wrists on the rest and turn your wrists from side to side to key. This increases the strain on your wrist.

B. Additional Techniques for Computer/Office Users

(1) Repetitive and prolonged use of a computer keyboard and/or mouse can lead to muscle aches and discomfort. Posture and positioning are important. Try to incorporate the following tips into your work style to avoid problems.

(a) Keep the mouse and keyboard within close reach and at the same level.

(b) Center the most frequently used section of the keyboard directly in front of you.

(c) Place source documents on a document folder positioned between your monitor and keyboard. If there is not enough space, place documents on an elevated surface close to your screen.

(d) Float your arms above the keyboard and keep your wrist straight when keying.

(e) If you use a palmrest, use it to support your palms when pausing, not while keying.

(f) Hit the keyboard keys with light force. The average user keys four times harder than necessary.

(g) Don't hold the computer mouse with a tight grip or extend fingers above the activation buttons.

(h) The screen font, contrast, pointer size, speed, and color can be adjusted to maximize comfort and efficiency.

(i) Place your monitor away from bright lights and windows. Use an optical glass glare filter when necessary.

(j) Take periodic eye breaks and intermittently refocus on distant objects. Try palming your eyes in your hands to reduce eye fatigue.

(k) Periodically adjust your body posture.

260.6 ERGONOMIC ASSESSMENTS

A. The CNM Safety Personal will conduct an ergonomic assessment of a workstation when triggered by a reactive or proactive request. The Safety Personal will use the checklist identified on page 6-7.

B. Ergonomic Assessment Findings

(1) When problems are identified for correction, supervisors and employees in the affected areas are notified. The Ergonomics Team, in conjunction with the affected employee(s), will develop possible solutions, choose the most appropriate solution, implement the changes, and follow up to determine the effectiveness.

(2) For each problem job that has been altered, a file of the improvements and changes will be maintained at the safety department.

(3) In addition, employees should take steps to prevent musculoskeletal disorders by taking brief breaks and stretching periodically throughout the day. Stretching is an effective way to reduce the effect of risk factors on the body.
260.7 TRAINING/RECORDKEEPING

A. Online training courses in ergonomic safety will be available for the employees as needed.

B. Safety department shall maintain copies of ergonomics evaluation reports for a minimum of three years.
## Ergonomic Assessment Checklist

Section 260-Rev 0  Office Ergonomics  CNM| 5 of 14
### Top of the screen is at or below eye level.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### User with bifocals/trifocals can read the screen without bending the head backward.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Monitor distance allows you to read the screen without leaning back/forth.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Monitor position is directly in front.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Glare (for example, from windows, lights) is not reflected on your screen which causes an awkward posture to clearly see information on your screen.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### WORK AREA

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Thighs have sufficient clearance space between the top of the thighs and workstation

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Sufficient clearance space under the work surface.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Document holder, if provided, is stable and large enough to hold documents.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Document holder is placed at about the same height and distance as the monitor screen.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Wrist/palm rest, if provided, is padded and free of sharp or square edges that push on your wrists.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Telephone can be used with your head upright (not bent) and your shoulders relaxed (not elevated) if you do computer tasks at the same time.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Workstation and equipment have sufficient adjustability so you are in a safe working posture and can make occasional changes in posture while performing computer tasks.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Computer workstation, components and accessories are properly functional.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Phones & other accessories on the side of dominant hand and not elevated

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### HABIT

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Repetitive work or sports when not at work.

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Micro break, change postures?

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### STRESS

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Stress scale from 1-10?

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
</table>

### Injuries (past/present)?

<table>
<thead>
<tr>
<th></th>
<th>Y</th>
<th>N</th>
</tr>
</thead>

</table>

### Recommendations:

<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
</table>
1. Adjust chair to correct position, height
2. New Chair (Test out first)
3. Adjust sitting position
4. Footrest
5. Periodic micro-stretching
6. Wrist rest for mouse
7. Wrist rest for keyboard
8. Adjust screen height
9. Adjust distance from eyes to monitor
10. Hands free device for telephone use
11. Implement means to reduce glare
12. Adjust workstation setup to prevent overreaching
13. Adjust desk height
14. Sit-to-stand desk
15. Reduce clutter under desk
16. Other (describe below):

CNM Safety & Environmental Health Department

Office Ergonomic Evaluation SOP (10/20/2017 version)

Before Evaluation

1.) Receive ergonomic evaluation request from employee.
   a. Phone
   b. Email
2.) Ensure you have all the important information from employee.
   a. Reason for evaluation
   b. Location of workstation(s)
   c. Urgency
   d. Supervisor name
3.) Schedule a date and time to perform the ergonomic assessment and email both the employee and supervisor.

Day of Evaluation

1.) Ensure you have all the equipment and papers needed for the evaluation.
   a. Tape measure (eye line to screen distance)
   b. Assessment checklist
   c. Packet for employee (stretches/OSHA E-tool)
2.) Perform Evaluation
   a. Have employee sit or stand as they would do on a normal day of work
   b. Utilized the checklist to ensure nothing is overlooked
   c. Gather all the information and utilized the ergonomic assessment check list recommendations section.

After Evaluation

1.) Email recommendation form to employee and their supervisor.
2.) Follow up within 4 weeks after initial assessment.
**Ergonomic OSHA E-Tool**

**Upright Sitting**

*Upright sitting posture.* The user’s torso and neck are approximately vertical and in-line, the thighs are approximately horizontal, and the lower legs are vertical.

![Upright Sitting](image)

*Figure 1. Upright sitting posture*

**Standing**

*Standing posture.* The user’s legs, torso, neck, and head are approximately in-line and vertical. The user may also elevate one foot on a rest while in this posture.

![Standing](image)

*Figure 3. Standing posture*
Declined Sitting

Declined sitting posture. The user's thighs are inclined with the buttocks higher than the knee and the angle between the thighs and the torso is greater than 90 degrees. The torso is vertical or slightly reclined and the legs are vertical.

Reclined Sitting

Reclined sitting posture. The user's torso and neck are straight and recline between 105 and 120 degrees from the thighs.
Figure 7. Reclined sitting posture

Figure 8. The user's torso and neck are straight and recline between 105 and 120 degrees from the thighs.
Periodic Computer Stretches

**Exercise for Computer Users and Office Workers**

Stop, s-t-r-e-t-c-h and check!
- Do a few of these exercises a few times every day.
- Dots show the muscles that you are exercising.
- Make sure you relax and perform them gently.
- Hold the stretch or repeat as indicated on the diagram.
- Do not over-stretch.
- Stop if you feel discomfort when performing an action.
- Remember to do each side.

While you are exercising, read the notes alongside each instruction and consider whether your workstation is adjusted to suit you.

**Neck**

**Diagram 1: Head Rolls**

Gently lower ear to shoulder and hold for 10 seconds. Slowly roll chin to chest and up to other shoulder and hold for 10 seconds. Repeat several times and be careful not to extend your neck back too far.

**Diagram 2: Head Turns**

Turn head to look over left shoulder and hold for 10 seconds. Turn head the other way and hold for 10 seconds. Repeat several times.
**DIAGRAM 3: CHIN TUCKS**

Raise the head to straighten the neck. Tuck the chin in and upwards creating a double chin. This also results in a forward tilt of the head. Hold for 10 seconds and repeat several times.

**Check neck posture**
- Position the top of your screen at eye level.
- Use a document holder directly beside or below the screen — it saves you looking down.

**Shoulders**

**DIAGRAM 4: SHOULDER ROLLS**

Circle shoulders forward several times, then backward. Repeat 3 to 5 times.

**DIAGRAM 5: SHOULDER STRETCH**

Stretch arm above head, cradle elbow with hand and gently pull elbow behind the head. Hold for 10 seconds and repeat several times.

**Check shoulder posture**
- Relax your shoulders and rest your hands on your lap. Bend your elbows to 90 degrees and check the height of your finger tips against your current work height. If the work (keyboard or desk) is higher than your hands you may be hunching your shoulders unnecessarily. If so, try and raise your chair height or lower your desk height and try and relax your shoulders while working.

**Wrist, hands and arms**

**DIAGRAM 6: WRIST STRETCH**

Interlace fingers, palms outward, and straighten arms in front. Hold for 10 seconds and repeat several times.

**Check hand and wrist posture**
- While keying, keep your wrist straight while your fingers are suspended over the keyboard.
- Keep elbows at keyboard level. This may mean adjusting the desk or chair height.
- Don’t rest your wrists on the desk or keyboard. Keep hands suspended.
- Rest on the desk between periods of keying.
### Upper and lower back

#### Diagram 7: Upper and Lower Back Stretch

- Interface fingers and turn palms upward above head; straighten arms then slowly lean slightly from side to side.
- Repeat movement several times.

#### Diagram 8: Back Arching

- Stand up. Support lower back with hands and gently arch back. Gently arch back and hold for 5 to 10 seconds.
- Repeat as often as is needed.

### Eyes

#### Diagram 10: Eye Exercise

- Sit up straight, face forward and repeat this sequence several times without moving head. Look up, then down. Look left, then right.

### Legs

#### Diagram 9: Foot Rotation

- Hold onto the chair with hands either side. Straighten leg and lift foot a few centimetres off floor. Rotate foot and ankle both ways (point toes up) and extend (point toes down). Repeat several times per foot.
- **Check leg comfort:**
  - If the seat of your chair is digging into the back of your thighs check that it is not too high or whether it is tilted backwards.
  - If the seat is too high lower the chair and desk or use a foot rest to support your feet.
  - Also check the tilt of the seat and if necessary adjust it to a horizontal position.

### Visual rest

- Look up and away from screen. Focus on a distant object (more than 3 metres). For example, look out of the window or at a picture on a far wall. Shift vision back to screen and refocus.

### Check eye comfort

- Is there enough light falling on your eyes?
- Do windows or light fittings cause glare or reflection on the screen? If so, try turning the screen or blocking the path of the light.
- Use a screen with a light background when working with text. Software with a light background for text is more comfortable for the eyes.
